Continuation Sheet (PTO-303)

Application No.

Con't of 11.

Applicant combined the dependent claims of 13-15 into independent claim 1 with the limitation "a single piece of a silicone rubber with a Shore hardness greater than 30" (Remarks/Arguments filed on 7/25/08). However, the Prior Arts still read upon the claimed invention. Based on the changes of the Remark filed on 7/25/08, the update rejection as following

Claims 1-10, 12-28 are rejected under 35 U.S.C. 103(a) as being unpatentable over Guy et al. (US 5,334,164) in view of Stevens et al. (US 5,935,112).

Regarding claims 1 and 21, Guy discloses a variable interior dimension cannula valve, however, it can be used as an insertion catheter, since insertion catheter are usually includes an elongate flexible tube. The device comprising: sealing element 7; a tubular main body 9 of an elastic material (col. 6, lines 63-68), a peripheral wall of the main body enclosing a hollow space that extends along a longitudinal direction of the sealing element with a connecting passage 32 for fluids; wherein the peripheral wall in the region of the connecting passage is designed in respect of elasticity of the material, thickness of the wall and inside diameter of the hollow space, such that twisting the main body causes a constriction (at 32) of hollow space in the region of the connecting passage in such a way that the constriction is at predetermined position in relation to the longitudinal direction of the sealing element (see Fig. 6-7). Examiner is taking position that if the more twisting of the body of 9, the diameter of hollow space will be reducing and the longitudinal is shorter also.

Guy in view Stevens disclose the claimed invention except for that the tubular main body comprises a material with Shore hardness greater 30.

It would have been obvious to one having ordinary skill in the art at the time the invention was made to provide a tubular main body with a material of Shore hardness greater than 30, since it has been held to be within the general skill of a worker in the art to select a known material on the basis of its suitability for the intended use as a matter of obvious design choice.
